

Raghunandan Sharma

ReactJS Developer

Mid-level ReactJS Developer with strong skills in crafting intuitive interfaces and developing robust front-end solutions. Proven expertise in multi-path conditional workflows, AI-assisted quiz generation pipelines, and data integrity management.

Skills

Languages: JavaScript, TypeScript
Backend: Node.js, Express.js, REST APIs
Tools: Git, Docker, Storybook, Vitest

Frontend: React, Redux, Tailwind, Sass, CSS, HTML
Data: MongoDB, IndexedDB
Platforms: Vercel, Azure DevOps

Work Experience

Srijan (A Material+ Company)

Associate

Sep 2023 – Present

Tech: React • Node.js • MongoDB • AWS Bedrock • JavaScript

- **Built** a MERN-based internal knowledge platform for QA teams, implementing CRUD systems (pages, quizzes, comments) and a tag-driven retrieval layer to improve information discoverability.
- **Integrated** an AI-assisted quiz generation pipeline using AWS Bedrock (Nova Lite), aggregating multi-page context to generate structured quizzes with answer keys for knowledge validation workflows.
- **Integrated** an AI-assisted quiz generation pipeline using AWS Bedrock (Nova Lite), aggregating multi-page context to generate structured quizzes with answer keys for knowledge validation workflows.
- **Ensured** data integrity and system reliability by detecting logic inconsistencies during data migration and preventing pre-deployment issues such as incorrect media mapping, quota misconfigurations, and missing logic conditions.

Developer

Aug 2022 – Aug 2023

Tech: Storybook • Docker • Sass • Azure • SonarQube • Atomic Design

- **Leveraged** Storybook controls in a legacy Drupal (PHP) environment to enable dynamic component interaction without additional code.
- **Improved** code reliability by enforcing quality standards using SonarQube and containerizing applications with Docker, ensuring stable deployments across multi-server environments.
- **Optimized** frontend performance by refining asset delivery pipelines, reducing load times by 10% through JS minification and asset compression.

Projects

DTD Tasks [Live Link](#)

Apr 2024 – Present

Tech: Vite • Redux • TypeScript • jsPDF • JSZip • Vitest • Tailwind

- **Built** a client-side utility platform combining event tracking, expense management, QR generation, and a custom mark-down editor to consolidate fragmented tools into a single system.
- **Re-architected** the frontend from Atomic Design to a feature-based structure, reducing component duplication and improving scalability as features expanded.
- **Designed** a client-side data and export system using IndexedDB and a no-auth persistence model, supporting JSON, PDF, and ZIP outputs for data portability across devices.

Howdy (Web Chat App) [GitHub](#)

Nov 2021 – Jan 2022

Tech: React • Node.js • MongoDB • WebSockets • JWT

- **Contributed to** a real-time chat application using WebSockets, enabling low-latency messaging between users.
- **Worked with** backend systems involving MongoDB for message storage and JWT-based authentication for secure user sessions.

Education

BE – Computer Science and Engineering

Chitkara University, Punjab

8.69 CGPA

Relevant Coursework: Web Development, Data Structures & Algorithms
